

How to find the model number your vintage Sunbeam Mixmaster

To find your Sunbeam Mixmaster's model number, unlatch the mixer's motor from its stand and turn it over. On older models (3-12) with a cord that enters the motor from the rear and doesn't unplug, you'll find the model number on the junction box cover plate.

Trust us...

It says Model 7B.

On 70's and 80's models, Sunbeam complicated things a bit by changing the number we need from "model number" to "service number", but it's a lot easier to read. As a general rule, 70's models normally have a cord that unplugs from the side of the motor. 80's cords usually connect to the right side, too, but are permanently attached.

On 70's and most 80's mixers, you'll also find the number underneath the motor, but it's usually stamped into the rectangular beater eject plate where you insert the beaters.

Some common numbers you'll see are : MMA, MMB, 1-7A, 1-8B, etc. There doesn't appear to be much "rhyme or reason" to Sunbeam's "service number" system on these models, but they're all very reliable machines, requiring very little repair or maintenance. Unlike the older designs, they require no periodic oiling, and have no oiling ports.
